

PRESS RELEASE

Here at the NBA we have been working on a proposal to construct a VERY FAST TRAIN network for quite some time. In fact, we are proud to announce that we have already embarked on a preliminary scoping study, interim feasibility report, pre-cursory cost assessment and long-term cost-benefit evaluation exercise.

Once that's complete, and depending on our consultants being able to come up with the answer we gave them, we hope to have the process moving forward by 2020, the expressions of interest completed by 2030 and the final project plans ready to go by 2035. Or maybe 2036 – it depends on how long the photo-copying will take.
